

UV Inkjet

UV inkjet printing is an option for durability and eco-friendly printing. UV inkjet printing utilizes an ink which contains UV-sensitive pigments. Once the printed ink is cured under UV light, it will form a quick-dry, solid colored layer on the substrate, offering a water resistant and lasting printed result.

Key Features

- Glossy or matte film and paper labels are applicable.
- Applicable for both digital printing and traditional printing.
- Eco-Friendly materials.
- Our products are widely applied to UV inkjet printing presses.
